
CLIENT DELIVERY SYSTEM

TRAFFIC

The channel rule, structure, lead scoring

Owner: Claude builds the structure, Devon runs the account.

Do not spend a dollar before this checklist passes. Ads into a leaking path are a donation, not an investment.

PRE-FLIGHT — EVERY CLIENT, NO EXCEPTIONS

- ☐ Someone answers the phone, or missed-call text-back is confirmed live
- ☐ Landing page loads fast on an actual phone, not just dev-tools mobile view
- ☐ The form submission actually lands in the client's GHSL sub-account — test it yourself
- ☐ Ad copy and landing page headline use the same words (03-ad-creative.md rule)
- ☐ Tracking is wired: source of inquiry has to be attributable per channel from day one

If any box is unchecked, fix it before launch. A week's delay here is cheaper than a month of ads into a page nobody can load.

THE CHANNEL DECISION

Set once, at intake \$2.4, and it doesn't change mid-pilot without a real conversation.

Client took video ads → Meta. The film is the unfair advantage. Creative-led targeting works because the ad itself pre-qualifies the viewer — someone who watches 8 seconds of an epoxy floor going down is already self-selecting. **Client declined video ads → Google.** Intent already exists in the search. Capture it instead of trying to create it with a feed ad nobody asked for.

Why not both from day one: splitting a local budget across two platforms means neither gets enough volume to produce a real signal. Pick one, get a verdict, then consider adding the second once the first is proven.

META STRUCTURE

Campaign: one, objective = Leads (on-platform form or to the landing page — test both if budget allows past month one).

Ad sets: by angle, not by demographic slice. A local business audience is small; slicing it further kills volume before the algorithm can learn.

- Ad set 1 — broad, no interest targeting beyond location + trade-adjacent, radius from service_area
- Ad set 2 — retargeting: site visitors + video viewers ≥50%, last 30 days

Ads per set: the 2 video cuts + static from 03-ad-creative.md, run together, let the platform allocate spend. Don't hand-pick a "winner" before it has real impressions.

Budget floor to reach a verdict: roughly 50 leads' worth of spend before judging an angle. Below that, you're reading noise. If the local CPL is unknown, start at \$30–50/day and recalculate after week one.

GOOGLE ADS STRUCTURE

Campaign type: Search, not Performance Max, for the first 90 days. PMax obscures what's working; a new account needs to see it.

Keywords: service + city, tight match types. Pull the highest-intent terms from the SEO audit (`01b-seo-audit.md`) rather than guessing.

Ad groups: one per service from intake §2.1, not one giant group. Tighter groups → higher quality score → cheaper clicks.

Assets: 15 headlines / 4 descriptions from `03-ad-creative.md` Step 5, sitelinks to landing page sections, callouts for anything intake confirmed as true (licensed, insured, years in business).

Negative keywords from day one: "jobs," "how to," "DIY," "free," "cheap" — filters the browsers and job-seekers before they cost a click.

LEAD SCORING — WIRE THIS BEFORE SPENDING

The point: the algorithm should optimize for **a real customer**, not for any form submit. An unscored funnel teaches the platform to bring you more of whatever fills the form cheapest — which is often junk.

Server-side, at minimum:

1. Tag every lead in GHM by source (ad platform + campaign + ad)
 2. Fire a conversion event back to the platform only when a lead is qualified — not at form submit
- Meta: Conversions API, a "Qualified Lead" custom event
 - Google: offline conversion import, or a GHM → Google Ads integration if available

1. Qualified = a real human criterion agreed with the client at intake — e.g. "booked an estimate,"

not "filled a form." Get this definition in writing before launch.

Without this, month one looks great and month three looks terrible — the algorithm optimized for cheap form fills, which are disproportionately unqualified once real spend flows toward what it thinks is working.

KILL / PROMOTE RULES

Check weekly, not daily — a local budget doesn't produce daily-significant data and reacting to noise wastes spend chasing it.

Kill an ad when:

- Spend has passed the budget floor above with no qualified lead

- CTR sits meaningfully below the account average after real impressions, not the first 100

Promote an ad when:

- Cost per *qualified* lead is best in the set — not cheapest form-fill, cheapest qualified
- Reallocate budget toward it rather than launching something new

Kill a channel (not just an ad) when:

- After the full budget floor, cost per qualified lead is clearly worse than the client's stated

acceptable range from intake \$2.5 — and the creative variable has already been tested, so it isn't a creative problem in disguise

RULES

1. **Fix answering before buying traffic.** Repeated because it's the rule most often skipped.
2. **One channel first.** Prove it, then consider the second.
3. **Score for qualified, not for form submits.** Otherwise the algorithm optimizes against you.
4. **Weekly review, not daily.** Local volume doesn't support daily decisions.
5. **Never promise a lead volume or a ranking.** Promise the structure and the measurement — see

07-reporting.md .
